## **Idea**

Project Idea: I have a startup of clothing brand that is an online store namely HAM'S WEAR. There will be franchise of HAM'S WEAR in future. So, I thought to develop an android application for the franchise. It should be user-friendly, and it should have a login method separate for each client. Furthermore, the application should have different categories for different type of products. So, the different type of people directly goes their need and buy item which they want.

## **Application Functionality**

There are four basic functionalities in this application that are login screen, product dashboard, and product description.

### ➤ **Login Screen**

In the initial phase the application will require authenticated user then the further feature will be visible. the user needs to enter correct username and password for getting the access to application features.

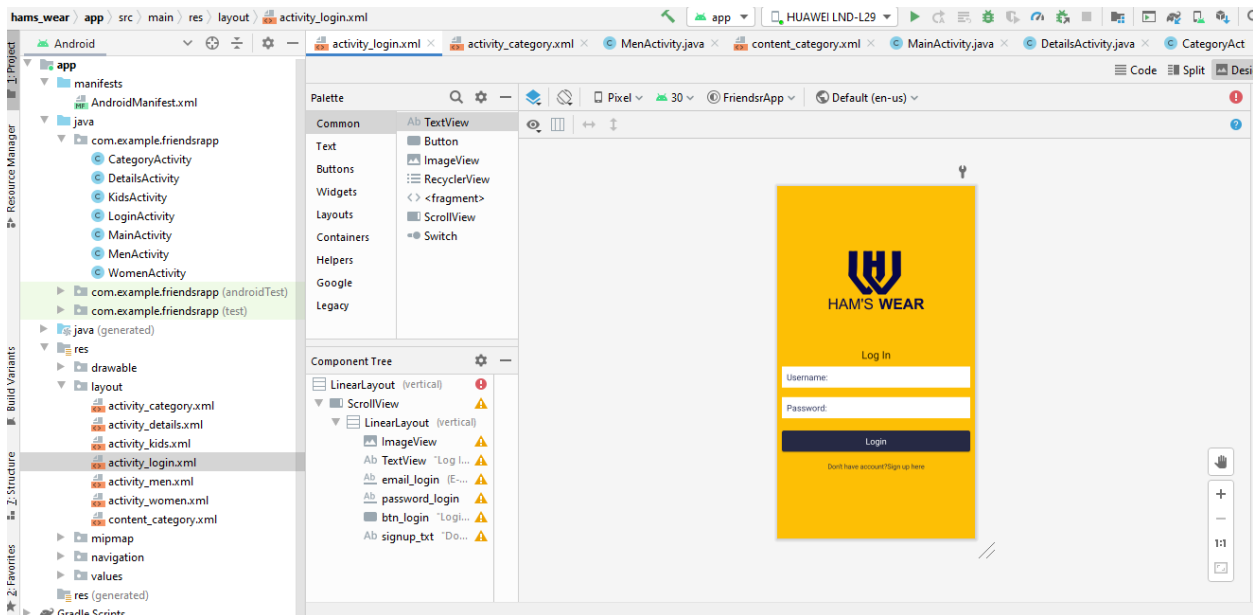

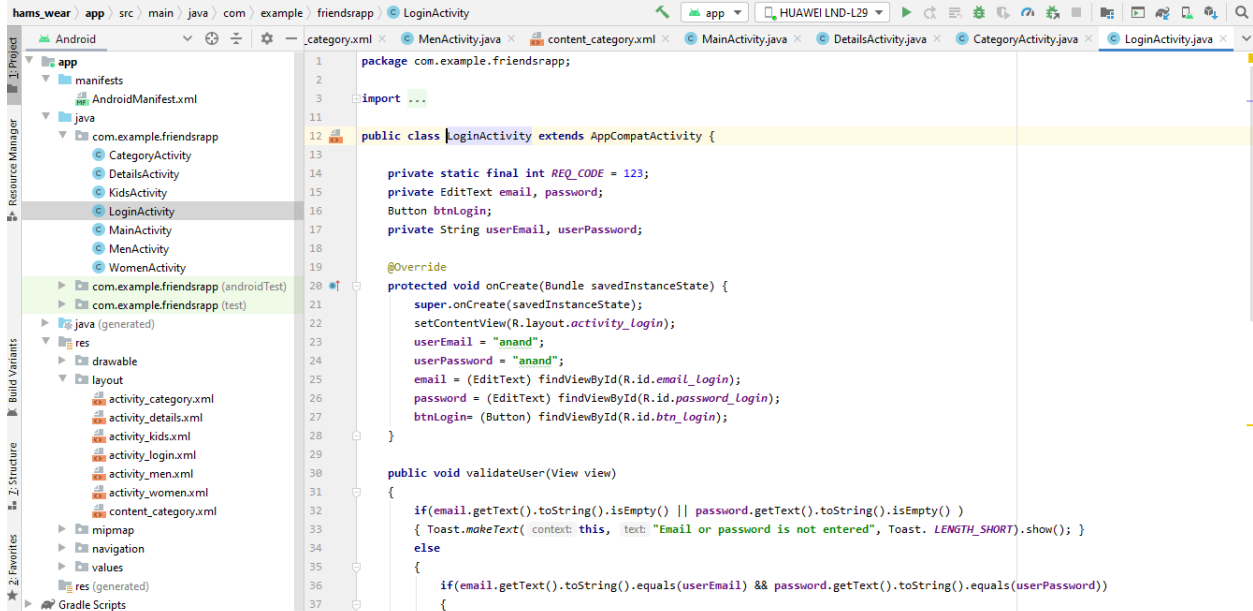

### ➤ **Product Dashboard**

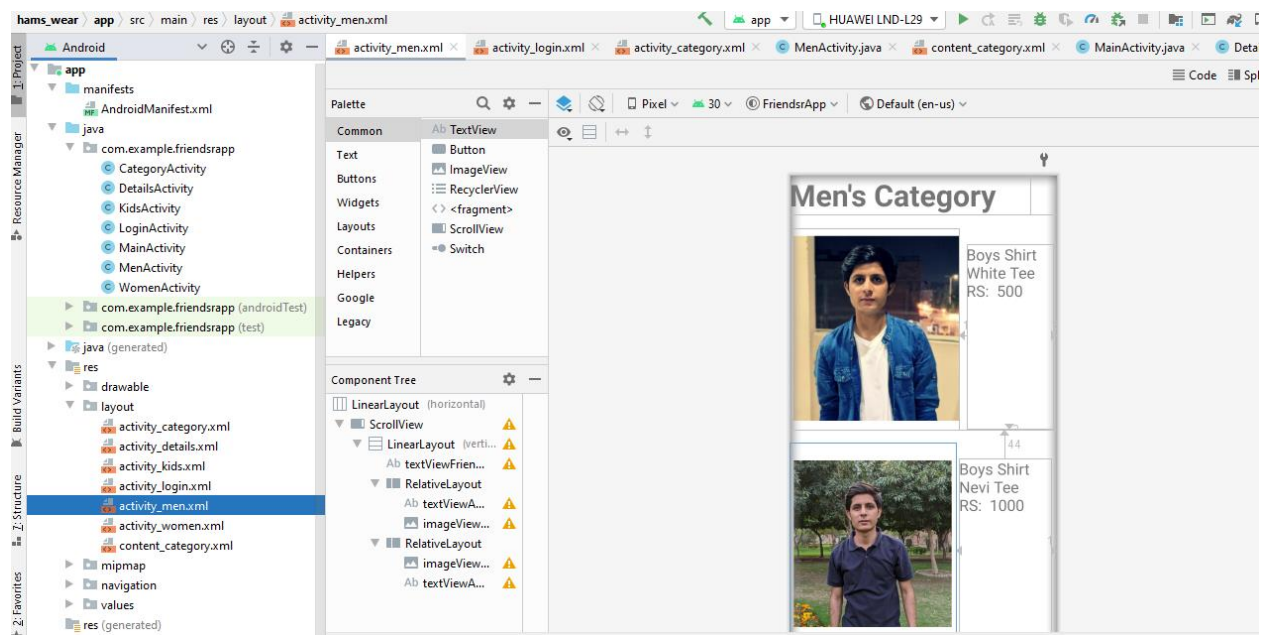

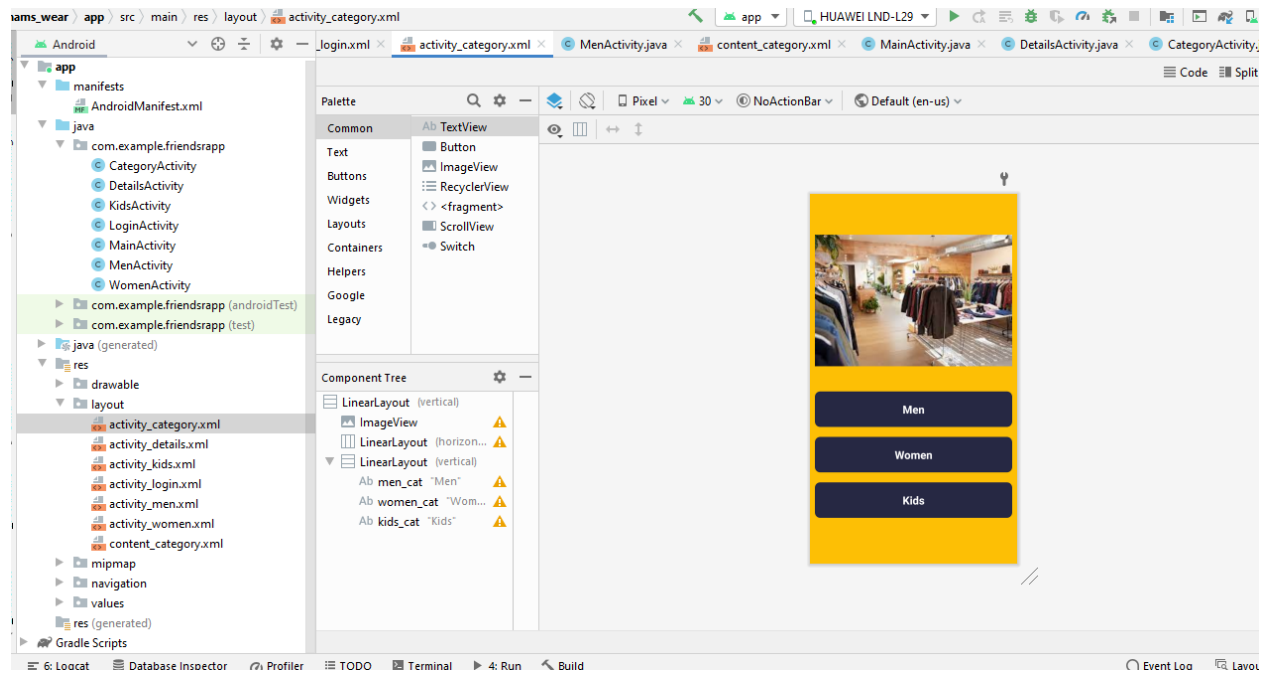

The dashboard part will be visible when the authenticated user login to application. It includes products that are the organized in category that are the men, women, and kids.

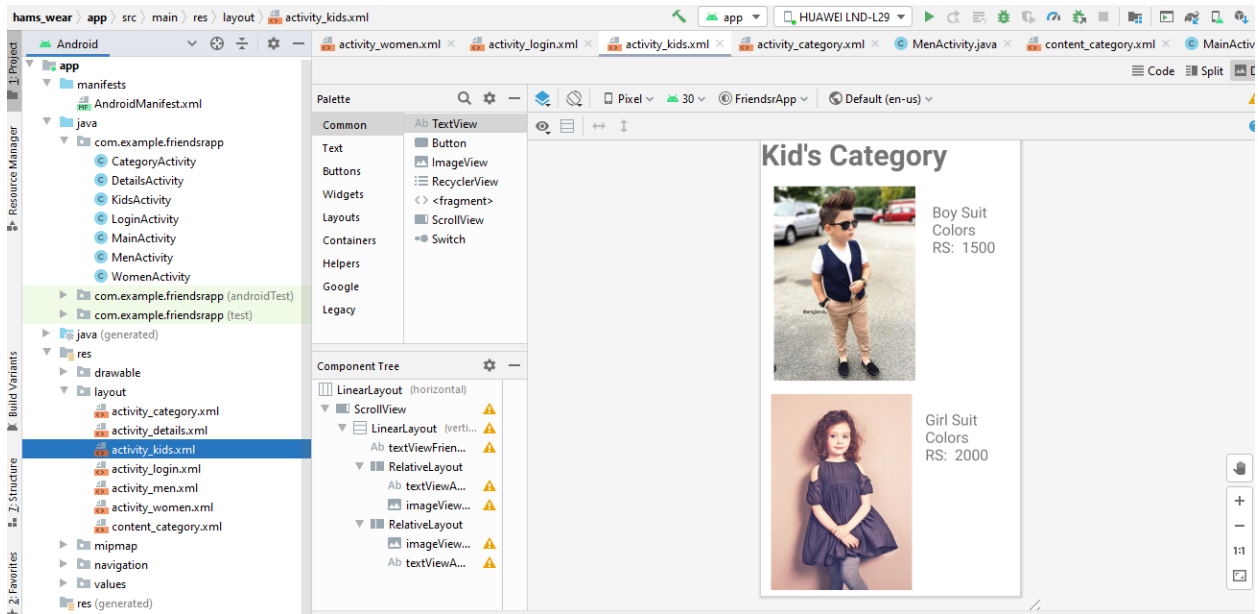

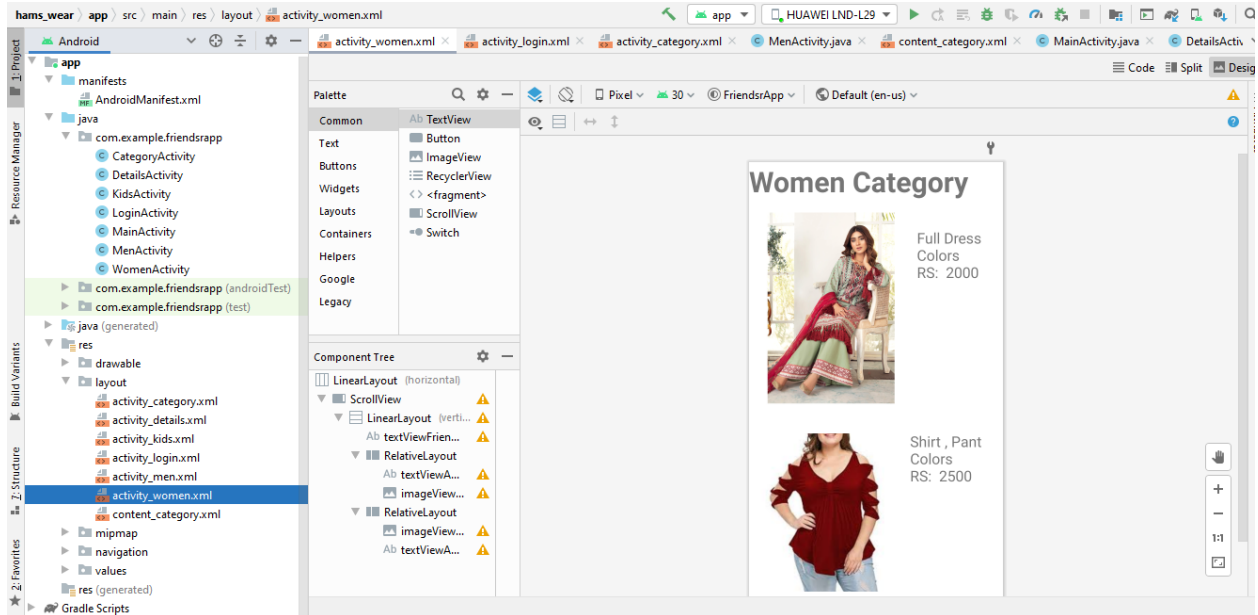

### ➤ **Product description**

It includes the description of product. Such as each products have certain attributes that are size, color and so on.
